1 REMOVE the seat by removing the 10mm bolts

2 Open the air filter cover and remove the M8 bolts on the inside to loosen the radiator shrouds.

3 Remove the three bolts on the side of the radiator shroud to completely remove it from the bike.

4 Align the brace with the following three holes. Insert M6 bolt through the brace and frame and hand tighten to loosely hold it in place.

5 Secure the radiator guard with M6 Bolt to the inside frame. Align the top and bottom holes of the radiator guard to the brace and insert an 2x M8 bolts

6 Refit the shrouds and seat
